Flathead: 3,9 kg
Art.-No. 1050 €59,00

Ball head: 3,9 kg
Art.-No. 1049 €59,00

Flathead: 5,1 kg
Art.-No. 1048 €98,00

Typ A

Elevator tripods 5/8"

With plastic feet for inside working

Typ C

HEDÜ

Altitude 0,61 - 1,73 m
Crank altitude 33 cm
Weight 1,2 kg
Inclusive bag

Art.No. 1083 €49,00

Altitude 0,75 - 2,86 m
Crank altitude 32 cm
Telescope pull out 56cm
Weight 3,5 kg
Inclusive bag

Art.No. 1085 €129,00

Wall bracket

Typ F

Wall tripod with fast locking system for profile or screw fixing. Cheap solution for adjusting a rotation laser or line laser on ceiling level. This tripod has a 5/8" thread.

Wall tripod
Art.-No. 1310 €70,00

Elevator tripods

Typ B

Exact adjustable altitude by a crank. Up to 4m highness.

With the crank you can adjust every altitude within a millimetre. The tripods No. 1053 and 1055 are specially made for working outside. By the high tripods (1054, 1065 and 1058)

you have additional to the crank a extender elevator column. The tripod 1054 is a cheap solution for the working inside. The strong price increasing from tripod 1056 on, comes by the additional cross braces, which stabilizes the tripod, and this

New locking system exchange the chains.

increase the quality itself, of course.

The tripod shoes are a feature of the tripods 1054 and 1056. For working on rough terrain you can screw back the rubber shoes (left part of the picture); for working on sensitive ground, you can screw

them down and the floor is protected (right part of the picture). This make the tripods good for jobs inside and outside.

Normal tripod shoes They are for the terrain. The shoes has to be pushed in the ground, and by this the tripod is fixed. If you are working on sensitive floors you should use a tripod star. For example when you are doing a indoor job.
