

Aluminum leveling tripod 105 cm hedue NS1

Suitable for construction and surveyor's levels or rotary lasers

Thanks to the flat tripod plates, the medium-weight leveling tripods are suitable for construction and surveyor's levels as well as for rotating lasers. An aperture enables the use of an optical plumb beam. The aluminum used gives the tripod a high level of robustness and weather resistance, and the tripod legs can also be positioned securely in rough terrain using the entry aid.
