

Hedue WA2 tilt adapter

For setting rotary lasers for inclinations up to 100°.

The tilt adapter is suitable for mounting on a tripod to display inclinations of up to 100° with a rotating laser. Thanks to a locking screw, the adapter can be positioned easily and without interference. The slim and flat design allows it to be used on tripods with a 5/8 thread. This means that mapping inclinations is also no problem for roof and ceiling constructions.

Made of powder-coated steel

graduation in 5° steps

Optimum adjustment by means of fine drive
