

Joiner's set in wooden box

Three high-quality measuring and marking tools for every carpenter in a wooden case

The set of classic measuring and marking tools consists of a joiner's square, mitre square and sliding bevel.

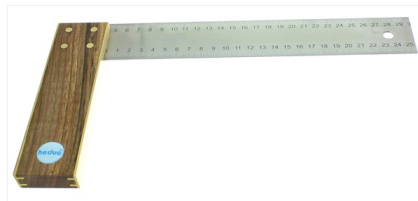

We use fine walnut wood for these high-quality measuring tools. Walnut is native to the whole of Europe and grows in warm locations. It is characterized by its lively grain and light to black-brown colouring. Walnut is a dimensionally stable wood that warps little and can be worked well.

The steel tongues are made of stainless steel and the joiner's square is marked with an abrasion-resistant millimeter scale. Brass rivets and a brass fitting give the trio a high-quality look.

Each angle is calibrated to an accuracy of at least 0.06°. You can obtain the calibration certificate by scanning the QR code on the bracket.

In wooden storage box

Etched, abrasion-resistant millimetre scale on both sides of the steel tongue

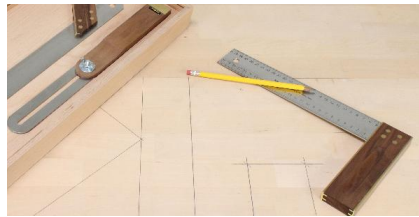

Stainless steel tongue

Features

- Stainless steel tongue
- Etched, abrasion-resistant millimetre scale on both sides of the steel tongue
- With brass fitting
- With stop
- Removal and transfer of angles
- In wooden storage box

With brass fitting

Removal and transfer of angles

Specifications

Warranty / Months	24
Accuracy of the 45° angle	0,06°
Accuracy of the 90° angle	0,06°
