

insulation gauge

For clean and accurate cutting of insulation materials in various sizes and thicknesses.

With the insulation gauge, you can simplify your work steps and achieve a clean cut when fitting your insulation materials. The stop of the insulation gauge runs in a guide rail and is locked in place with a wing screw. There is also a millimeter scale on the upper rail. This allows you to set up your cutting widths quickly and precisely.

The width of the support surface can be adjusted to your cutting length. By simply weighting the support with your own body weight, you can achieve a clean and straight cutting edge. The result is clean edges on all sides. This preserves the optimum insulating properties of the materials.

For transportation, the insulation gauge can be pushed together to a convenient size and is easy to carry thanks to its low weight.

The insulation gauge is adjustable in width and length and can be loaded with body weight when cutting to size.

Fast and accurate cutting of insulation materials

Stop with millimeter scale

Features

- The insulation gauge is adjustable in width and length and can be loaded with body weight when cutting to size.
- Fast and accurate cutting of insulation materials
- Stop with millimeter scale
- Made of aluminium

Made of aluminium

Specifications

Transport size	98 x 35 x 9 cm
Insulation width	74 - 123 cm
Cutting	30 - 110 cm
Weight	4,8 kg
Warranty / Months	24
EAN	4012589682009
