

Big square 100 cm

Easy to transport due to folding mechanism. Lockable for 45° and 90° angles.

The angles can be firmly locked at 45° and 90° and therefore offer an optimum starting angle for your trades. The big square proves its worth outdoors, for example, when measuring your paving, wooden and stone terraces, walls and fences or when setting up boundaries.

The big squares are also advantageous indoors when aligning floor coverings or when measuring stud frames. Made from 8 mm thick aluminum, the brackets are robust, inflexible and yet easy to transport. The brackets are collapsible and have a transport lock.

Collapsible

Adjustable for 45° and 90°

Features

- **Made of aluminium**
- **Collapsible**
- **Adjustable for 45° and 90°**
