

wall timber caliper

Precise measurement of wall thicknesses by gripping around the door chuck

The wall thickness can be determined quickly and accurately by gripping the door frame with the wall timber caliper.

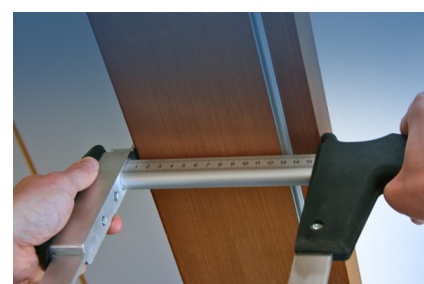

Thanks to the generous projection of both measuring arms, it is even possible to reach around very wide door frames, such as in old buildings.

Exact measurement of wall thickness by gripping around the door chuck

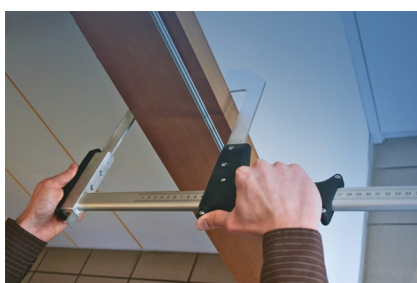

Silver anodized measuring bar

Millimetre scale on both sides

Features

- Exact measurement of wall thickness by gripping around the door chuck
- Silver anodized measuring bar
- Millimetre scale on both sides
