

Digital timber caliper

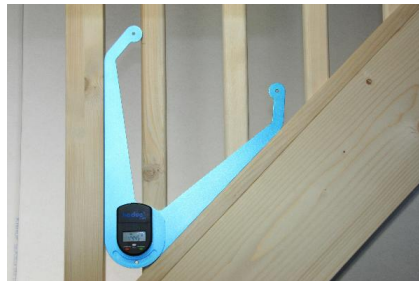

Timber caliper and angle measurer combined in one device

The digital timber caliper determines material or wall thicknesses precisely and reliably at the touch of a button. Thanks to the clever design, door frames, for example, can be easily gripped.

A function button turns the device into a digital angle measurer with a 180° measuring range. The measured values can be read off quickly via the illuminated display. Thanks to its lightweight aluminum construction, the digital timber caliper is easy to transport and therefore the ideal helper for your measurements.

Easy to read display

Fast switching between absolute and relative measurement

Function adjustable with just one keystroke

Features

- Easy to read display
- Fast switching between absolute and relative measurement
- Easy gripping of door frame or window frame to determine wall thickness or glass thickness
- Function adjustable with just one keystroke
- Switching between mm/Inch

Easy gripping of door frame or window frame to determine wall thickness or glass thickness

Specifications

Dimensions	425 x 100 mm
Measuring range	500 mm / 180°
Measurement accuracy	1 mm / 0,15°
Reading	0,1°
Type of battery	AAA
Number of batteries	2
IP protection class	IP40

Weight / Months

240 g

EAN

4012589833012

Scope of Delivery

- Batteries Alkaline
- QuickstArt
