

Glass thickness measuring tool hedue GlassCheck

For measuring the glass thickness of panes or insulating glazing

The GlassCheck is suitable for measuring the total glass thickness of panes or insulating glazing when installed. Thicknesses of up to 120 mm can be measured. In addition, an optical glass thickness gauge is integrated into this device. This makes it possible to read off the glass thickness of the individual panes.

Can also be used for already installed windows

Thickness measurement of single and insulating glass
