

Supplementary pack 3 + 3

Ideal for scribing stringers for spiral staircases

The turnbuckles can be used to securely connect the brackets together. You can adjust the step height and width on each bracket. You do not need a paper template or an angle board. Place the adjusted marking gauge on the raw stringboard. You can see the shape of the raw stringboard and the curve of the stringboard. By moving the angles on the raw stringboard, you achieve the best possible utilization of the stringboard wood with regard to knots and cracks.

The angles have a millimeter scale on both sides. Locks and brackets are made of high-quality stainless steel.

Ideal for marking the stringers of spiral staircases

Stable connection of the angles by turnbuckles

Height and width of the steps are individually adjustable

Features

- Made of stainless steel
- Ideal for marking the stringers of spiral staircases
